Math 9 HW Section 6.4 Solving Inequalities:

1. Indicate which side is bigger by writing the inequality symbol:

a) $5 \leq 10$	b) $15 \geq 12$	c) $-3 \geq -12$	d) $(2 \times 4.5) \leq \sqrt{80}$
e) $5.45 \geq \frac{18}{4}$	f) $\frac{100}{7} \geq 14.28$	g) $9.9999 \leq 10$	h) $1,000^{1000} \leq \frac{2}{0}$

NO ANSWER

2. Given each inequality, draw it on a number line

a) $x > 10$ 	b) $x < -4$
c) $x \leq 11$ 	d) $x \geq 5$
e) $3 \leq x \leq 10$ 	f) $-5 < x < 3$
g) $x < -4$ or $5 < x$ 	c) $x \leq 10$ or $20 \leq x$

3. Given each number line, write the inequality statement

a) $x > 5$	b) $x \leq -3$
c) $x < \frac{1}{3}$	d) $x \geq -\sqrt{12}$
e) $x < -4$ or $x > 9$	f) $-7 < x \leq -\frac{1}{80}$
g) $\sqrt{1000} \leq x < 5^3$	h) $x \leq \sqrt[3]{-8}$ or $x \geq -\frac{1}{4}$

4. Solve each of the following inequalities. Draw your answer on a number line

a) $x+7 < 12$ $x < 5$ 	b) $13+y < 17$ $y < 4$ 
c) $x + \frac{2}{5} < \frac{3}{10}$ $x < -\frac{1}{10}$ 	d) $\frac{3}{2} + x \leq \frac{-5}{2}$ $x \leq -4$ 
e) $-24 \leq 6x$ $-4 \leq x$ 	f) $\frac{4}{3}x \geq 12$ $x \geq 9$ 
g) $-18 \geq -10 - x$ $x \geq 8$ 	h) $8 - x \leq -15$ $23 \leq x$ 
i) $8 \leq 7x + 12 - 3x$ $-4 \leq 4x$ $-1 \leq x$ 	j) $7x - 20 < 12x + 5$ $-25 < 5x$ $-5 < x$ 

5. Solve the following inequalities algebraically:

a) $4x + 13 \geq 6(4 - 5x)$ $4x + 13 \geq 24 - 30x$ $34x \geq 11$ $x \geq \frac{34}{11}$	b) $95 + 2x > 10(14 + x) - 3x$ $95 + 2x > 140 + 10x - 3x$ $95 + 2x > 140 + 7x$ $-45 > 5x$ $-9 > x$
c) $7x + 21 - 15x > -4x - 6 - 13x$ $-8x + 21 > -17x - 6$ $9x > -27$ $x > -3$	d) $20 \leq -4x$ $-5 \geq x$

6. What is the difference between the two inequalities? Explain? $x < 5$ vs $x \leq 5$

$x < 5$ means its less than 5.

$x \leq 5$ means it could be less than or equal to 5.

7. Write an inequality for each expression below:

a. Jack's height (H) is taller than 6 feet

$$H > 6$$

b. Andrew bank account (A) has less than \$500

$$500 > A$$

c. The distance (D) that Selina ran was at least 15km

$$15 \leq D$$

d. The number of friends (F) that Kenny has is between 1 to 12

$$12 > F > 1$$

e. William's IQ (W) is less than 110

$$0 < W < 110$$

f. Heather's IQ (H) is at most 110

$$110 \geq H > 0$$

8. Suppose "x" is an integer. How many values of "x" will satisfy the equality?

$$1 < 2^x < 1000$$

$$2^{10} = 1024 \text{ so } x: 1, 2, 3, 4, 5, 6, 7, 8, 9$$

9. Suppose "x" is an integer. How many values of "x" will satisfy the equality?

$$100 < 2^x < 10,000$$

$$2^{14} = 16384$$

$$\text{so } x: 7, 8, 9, 10, 11, 12, 13,$$

$$2^6 = 64$$

10. How many integer values of "x" are there such that the inequality is true?

$$1 < x^3 < 1000$$

$$10^3 = 1000$$

$$\text{so } x: 2, 3, 4, 5, 6, 7, 8, 9$$

11. Jake is less than 10 years old. Write an inequality for Jake's age

$$10 > J > 0$$

12. Tom took his girlfriend out for his dinner. His budget was to spend up to \$300. Write an inequality for how much Tom can spend.

$$x \leq 300$$

he can spend up to 300

13. Sandy has \$20 to spend on donuts. Each donut costs \$2.75. Write an inequality to express how many donuts Sandy can buy.

$$2.75d \leq 20 \text{ She can buy 7 donuts.}$$

$$d \leq 7$$

14. Jeff wants to buy a cellular phone plan so can watch YOUTUBE on his phone. Rogers charges base \$20 a month plus \$2.50 on each GB of data. If Jeff has \$100 a month to spend on data for his phone, how many GB of YOUTUBE can he afford to watch?

$$20 + 2.5G \leq 100$$

$$2.5G \leq 80$$

$$G \leq 32$$

He can afford 32 GB of youtube.
